The 3300 Series meter relays offer a wide variety of applications in control, alarm, and limit use. Photo conductor sensing eliminates all interference with the indicating meter. These controllers incorporate an amplifier input that drives a rugged high-torque pivot and jewel meter. Metal-cased “Rugged Seal” construction withstands rigorous environmental conditions. The die cast metal bezel with a drawn steel plated rear case gives complete magnetic isolation for steel panel mounting. In addition, each meter is moisture, dust, and dirt proof for use in wash-down areas. Fail-safe circuitry opens output relays in the event of power failure.

Two different sizes, 3-1/2" and 4-1/2" are available in both single and dual set point models. High-gain transistor switch circuitry provides accurate switching with a “dead band” of no more than 0.5% of full scale (F.S.). All AC voltage units offer ±3% of accuracy F.S. This style meter is ideal for many other electrical functions. See “Function Reference Table.”
**Specifications**

- **Accuracy:** ±3% F.S.
- **Movement:** Annular, self-shielding
- **Adjustments:** Single, 0-100% of arc; double, low limit 0-95% of arc; high limit, 5-100% of arc. Adjustable to within 4º of each other
- **Switching:** Within 1% of indication
- **Differential:** “On,” “Off” difference is within 0.5% of F.S.
- **Auto/Manual Reset:** Latching function can be enabled independently for each relay by removing jumpers on terminal block.
- **Contacts/Output Relays:** DPDT relay contacts for each control point except motor load types. SPDT low point. Each set of contacts rated at 5 amps, 115 VAC.
- **Calibration Accuracy:** ±3% of F.S.
- **Repeatability:** Within 0.5% F.S.
- **Frequency Response:** 50-1000Hz
- **Input Signal:** Input to be monitored is connected to terminals A (+) and B (-).
- **Input Power:** The power source used is 120VAC ±10%, 50 to 400Hz. The power requirement is nominally 5VA. Connect power source to terminals 8 and 9.
- **Auto/Manual Reset**
- **Installing Auto/Manual Reset**
  - If Auto Reset is desired, simply connect a jumper between terminals 1 and 2 for the high set point or 6 and 7 for the low set point.
  - If Manual Reset is desired, connect a normally-open SPST push button switch to the terminals as shown in the terminal designation diagram.
- **Response Time:** 1.5 seconds maximum
- **Overload (1 sec.):** 10 times F.S.
- **Overload (Continuous):** 1.5 times F.S.
- **Repeatability:** 2%
- **Dial:** Sharp clear scale. Each dial arc is calibrated to track the specific type of movement used.
- **Resistance:** ±15%
- **Power:** 108-132 VAC, 50-400 Hz
- **Operating Temperature:** 41ºF to 122ºF (+5ºC to +50ºC)
- **Circuit-to-Ground Voltage:** 250 RMS maximum
- **Case:** Sealed metal, plastic window
- **Shielding:** Calibration is unaffected by magnetic panel mounting.

*ALL RELAY CONTACT POSITIONS SHOWN WITH RELAYS DE-ENERGIZED*
Relays can be used to turn on or turn off power to a process that the 3343AIXA and 3344AIXA are monitoring. A light can be turned on when a set point is exceeded, alerting the operator to change in condition in the process. The controller’s relays for both single and dual set point meters are double pole, double throw relays.

**High Set Point:** The high set point relay contacts (on both single and dual set point meters) are de-energized when the pointer is above the desired set point. For normally open relay connection use terminals 11 and 14. Terminals 12 and 15 are moving contacts. Terminals 13 and 16 are normally closed.

**Low Set Point Connection:** The low set point relay contacts (appear on dual set point meters only) are de-energized when the pointer is below desired set point. For normally open relay connection use terminals 21 and 24. Terminals 22 and 25 are moving contacts or common. Use terminals 23 and 26 for normally closed relays.

A Plant Supervisor of a newspaper publishing company needs to monitor the line voltage supplying power to a printing press and conveyor motor that operates the press rollers. If the line voltage exceeds 130 volts, the motor could burn up, shutting down the printing operation. In the event that a power surge happens, the maintenance team needs to be notified so as to activate a back-up generator to finish the newspapers and continue the printing process.

A Model 3343AIXA single set point meter relay (150 AC Volt) is installed in parallel between the source (line voltage) and the load (the conveyor motor) to monitor the line voltage. The Plant Supervisor adjusts the set point relay at 130 volts. If the voltage goes above the set point the relay will de-energize and will “turn on” a light that will alert the maintenance team to this change in condition.

The signal input is connected to Terminal A (+) and Terminal B (-) on back of the meter relay. The relay contacts for a normally closed state are Terminals 15 (common) and 16 (normally closed).
Adjustments

Set Point Adjustment
Low and High Set Point: To adjust dual set point units for low range, turn the adjustment knob at the left on the front face of the meter until the wide, red pointer indicates the desired reading (low from 0-95% of arc). High range adjustments are made by turning the black knob at the right on the front face of the meter (Hi from 5-100% of arc).

Zero Adjustment
Make sure that all power to the meter has been shut down. For zero adjustment, simply turn the slotted adjustment knob that is flush with the front panel. After zeroing the pointer, turn the knob back a few degrees in the direction opposite from your final adjustment. This frees the zero adjust from the pointer mechanism.
