Simpson’s Mini-Max Voltage Indicators provide high quality, accuracy and reliability in a compact, 60mm deep case.

LCD (Liquid Crystal Display) Units offer a 4-1/2 digit, 0.5” (12.7mm) LCD display with an optional bright red, negative image backlight.

LED (Light Emitting Diode) Units offer a 4-1/2 digit, 0.4” (10.2mm) display.

All units feature user-selectable decimal point, auto zero and limited scaling capabilities.

A unique mounting bracket is provided to allow for vertical or horizontal stacking of multiple indicators. All Mini-Max units feature a 3/64 DIM, high-impact plastic case. The LCD units have a clear viewing window and the LED units have a red viewing window.

**Installation and Panel Cutout**

Mounting Requirements
Insert the Mini-Max through the panel, and then slide the mounting bracket onto the Mini-Max. The mounting bracket allows Mini-Max units to be stacked side-side or top-to-bottom and maintain the DIM standard panel arrangements in 24mm by 72mm multiples. Panel cutout instructions for stacking multiple units are provided under “Stacking Features.”

WARNING: These instruments are designed for maximum safety to the operator when mounted in a panel according to instructions. They are not to be used unmounted or for exploratory measurements in unknown circuits.

Input Signal: Connect the DC signal to be monitored to the IN HI+ and IN LO- input terminals.

Input Power: For AC power, connect the AC POWER LINE to the AC LINE inputs. For optional DC power, connect the DC supply to the DC inputs. Observe polarity.

Decimal Point: To select a decimal point, connect the appropriate DP input pin (DP1-DP4) to the DP COMMON output. Unused DP inputs may remain unconnected (open).

LCD Hold Option: Connect the DP COMMON output to the HOLD input. If this feature is not required, the HOLD pin may remain unconnected.

LCD Backlight Option: Negative image, bright red backlighting is available for the LCD versions only. This illumination allows the unit to be read in low light areas. Backlighting power is supplied by the Mini-Max, so no additional external power is required.

Excitation Option: Excitation is available at the EXCITATION OUT Positive (POS) and Negative (NEG) terminals for powering external transmitters or transducers. This source is isolated from the measurement input as well as the input power circuits. The voltages available are 12Vdc or 24Vdc with a maximum load current of 25mA. This feature eliminates the need to mount an external DC power source for transducers or sensors used in your application.
Using a screwdriver or thumbnail, spread the tabs on each side of the case to unlock the top half. Lift the rear of the top half and slide it away from the front of the meter.

Scale Adjustment:
Mini-Max indicators have limited range coarse and fine adjustments for display scaling. There are no optional connections required for these to function. The meter can be scaled down to 1/2 the value of the input, or scaled up to 1 times the value of the input, or a maximum reading of 1.999, whichever is lower.

LED VERSIONS
Scale Adjustment:
The "Coarse" adjustment RV1 will allow a limited range of scaling values. The "Fine" adjustment RV2 allows for an adjustment range of approximately 1% of the "Coarse" adjustment. Apply the full scale input to the meter. Adjust RV1 to be within 1% of the desired result. Then use RV2 to obtain the final desired result.

Note: Any physical damage to the meter during adjustment will void the warranty.

LCD VERSIONS
Scale Adjustment:
The "Coarse" adjustment R12 will allow a limited range of scaling values. The "Fine" adjustment R9 allows for an adjustment range of approximately 1% of the "Coarse" adjustment. Apply the full scale input to the meter. Adjust R12 to be within 1% of the desired result. Then use R9 to obtain the final desired result.

Note: Any physical damage to the meter during adjustment will void the warranty.

Stacking Features
The mounting bracket, included with every Mini-Max, can be connected together. Multiple units can be mounted in a single opening, allowing perfect alignment.

To punch one hole for multiple units, be sure to adjust the standard panel cutout dimensions as shown here; otherwise the meters will not fit properly in the hole.

Mounting multiple units is quick and easy. Install the first meter (bottom unit first if stacking vertically). Position the next mounting bracket snugly against the first one, and slide the second meter into place for remaining units.

A company needs to monitor the power supply voltage and load current of a 12V 4 Amp DC motor.

**Voltage:** A Mini-Max 20V DC Volt meter is installed in parallel with the 12VDC power source. The IN HI+ terminal is connected to the positive lead of the power supply. The IN LO- terminal is connected to the negative lead of the power supply.

**Current:** A second Mini-Max 5 adc Ammeter is connected in series with the DC MOTOR. The IN HI+ terminal is connected to the positive lead of the power supply. The IN LO- terminal is connected to the Positive lead of the DC Motor. The Negative Lead of the DC motor is connected to the negative terminal of the 12VDC supply. The Mini-Max units will indicate the DC Motors supply voltage and load current.

**Safety Symbols**

The **WARNING** sign denotes a hazard. It calls attention to a procedure, practice, or the like, which, if not correctly performed or adhered to, could result in personal injury.

The **CAUTION** sign denotes a hazard. It calls attention to an operating procedure, practice, or the like, which, if not correctly adhered to, could result in damage to or destruction of part or all of the instrument.

**Accessories**

**Portable**

External shunts enable digital meters to indicate higher currents. A shunt is installed in series between the source and load. The shunt produces a DCmV drop which is measured by the Mini-Max meter. The Mini-Max can be scaled to display the actual current between the load and the source. Simpson manufactures portable and switchboard shunts.

Each portable shunt includes 5’ leads.

Example: 25Amp DC is to be measured. A Mini-Max M245 4 1/2 digit 200mVdc meter and 25Amp shunt, Cat. No. 06707, are selected for this application. 25Adc flowing through the shunt generates 50mV which is applied to the IN HI+ and IN LO inputs of the meter. The 50mV would normally display as 50.00 on the meter. By using the scale adjustments, the meter’s scale factor may be adjusted to 1/2. The meter will now display 25.00, thus providing a 25Amp indication.
